TWINCORE seminar room 002

## Oncolytic Virus Therapies

Prof. Dr. med. Dorothee Holm-von Laer  
Division of Virology  
Innsbruck Medical University

### Who is Dorothee Holm-von Laer?

Prof. Dr. med Dorothee Holm-von Laer is an internationally recognized biomedical researcher and the inventor of the VSV-GP technology, an oncolytic virus, that destroys cancer cells. In addition to her leadership role as co-founder and Chief Executive and Scientific Officer at ViraTherapeutics, she is a full professor and head of the Virology Institute at the Medical University of Innsbruck in Tyrol, Austria. Prof. Holm-von Laer gained biotech experience as a co-founder, shareholder and part-time Chief Scientific Officer of the Vision7 GmbH, a German biotech company founded in 2000. She served on the advisory board of the Paul-Ehrlich-Institute in Langen, and was a member of the review board of the GO-Bio funding program of the BMBF. She is currently a member of the Senate Committee for collaboration research grants at the German Research Foundation.
